How to Install the Water Supply & Drain Pipe

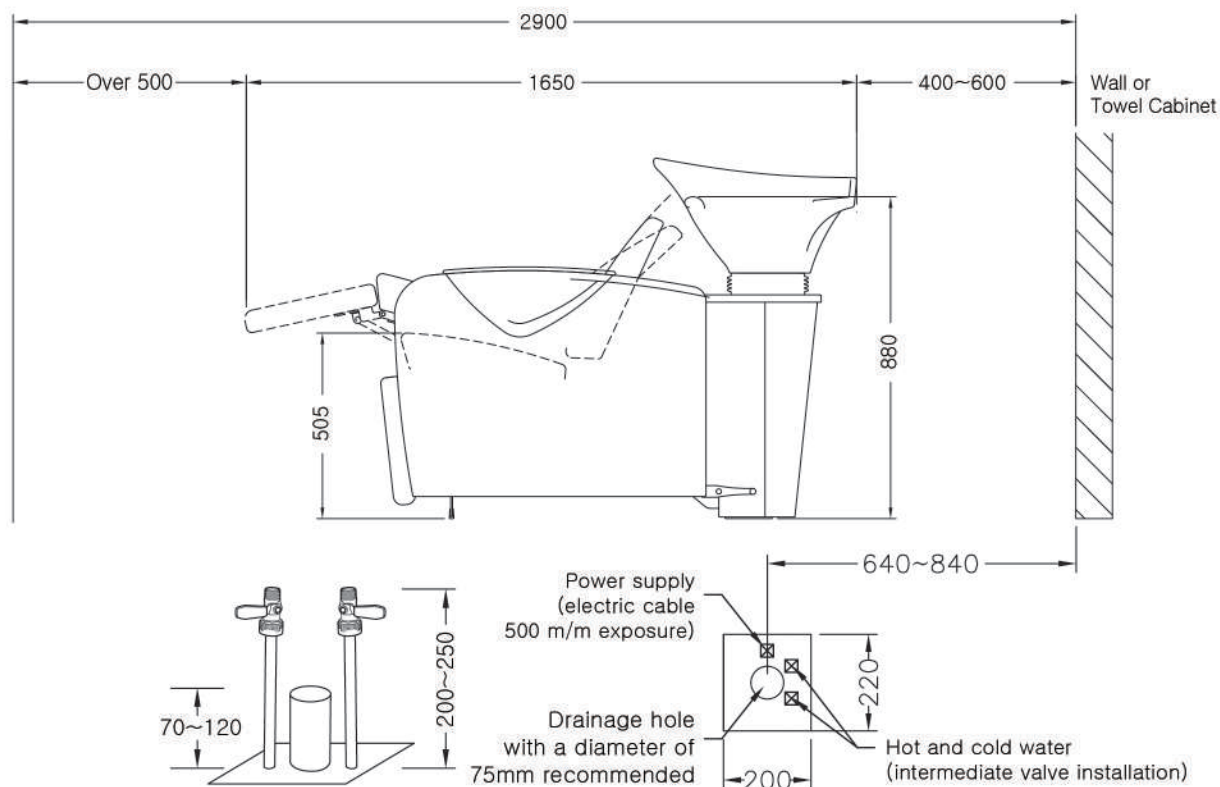

- Installation requires specialized skills, so you need the help of an installer or Authorized Dealer.
- Check the location of the water supply & drain pipe before installation.
- An intermediate valve must be installed in the hot and cold water supply pipeline.
- Before connecting the water supply, use a hose to drain water through the drain pipe for more than 1 minute to remove debris such as sands,
- Make sure the cold water (blue color) and hot water (red color) correctly before connecting.
- To prevent odor from drainage hole, drain hose is required to be in a way of U-trap.
- The connection between the drainage hole and the drain pipe should be sealed to prevent odor.
- Connect the water supply & drain pipe and let the water run for more than 1 minute to see if water is leaking.
- Check if water pressure is effected when sink, toilet, etc. is being used.

Installation Method (Fixing to the Floor)

- Make sure that the floor of the installation i is suitable for fixing.
- It is recommended to use the product no sooner than 1 day after installation.
